

# ENFLEURAGE

**“Perfected by Nature made Accessible by Yofumo”**

Yofumo's patented technology is designed to take advantage of its unique ability to create a clean environment in which to apply classical and modern techniques to finishing and curing. With this ability, which is only available through Yofumo, we could never have created our Enflourage Line of terpenes or revolutionary application techniques.

Yofumo has led many firsts when it comes to terpenes, including the industry's first terpene management framework, and the first precision application techniques for raw biomass and flowers.

**But stay tuned, this is only the beginning.**

All of Yofumo's terpenes are NON-GMO derived and are available in both mono and complex blends.

They are made to our precise specifications and are further calibrated to work with our equipment and systems to ensure a perfect application every time regardless of weight.

# YOFUMO CURE SPECTRUM

## 4 TYPES

### Plant on Self

- Isolated & controlled curing
- Unit and flower interaction producing best possible natural expression of plants natural aromatic, flavor, and cannabinoid maturation
- Strain quality is critical
- Methods: Temp, RH, control and manipulation

**App Method:**  
None; Flower and Unit Only

**Market:**  
ALL

**Passive Management & Manipulation**

### Plant on Plant

- Precise compound copy of native plant terpenes
- Non-GMO only extracts - 100% Natural
- Proprietary Yofumo blending and analysis
- Premium or exclusive strains

**App Method:**  
Yofumo Rod or \*TS

**Market:**  
Rec or Medical

### Partial Plant

- Precise compound copy of native plant terpenes
- Non-GMO only extracts - 100% Natural
- Proprietary Yofumo blending and analysis
- Focused on specific aroma and flavor spectrum elements of strain to emphasize

**App Method:**  
Yofumo Rod or \*TS

**Market:**  
Rec or Medical

**Active Management & Enhancement**

### Natural Botanicals

- Complete creative freedom with pure natural extracts
- Compliment to native strain terpene profile
- Multiple combinations
- Similar or opposites (e.g. sweet/sour - sweet/salty - sweet/sweet)
- Most versatile for recreational applications
- Simple to package commercially and for retail

**App Method:**  
Yofumo Rod or \*TS

**Market:**  
Rec or Medical

\* TS for commercial application only

■ These Aroma Spectrum Product/Applications are all fine tuned to be used with Yofumo gear.

# YOFUMO TERPENE APPLICATION FLOWER & CONCENTRATES

## Approach / Methodology / Custom Blending / Licensing

At Yofumo we approach terpene applications from a unique perspective which combines classical old world methods with the best of new world techniques and technologies to achieve a level of depth, application versatility, and product purity unmatched in the industry.

Yofumo's proprietary methods allow for complete control over aromatic and flavor profiles in any biomass without sacrificing or compromising the product's integrity, purity or natural properties.

### METHOD 1 | Rods

In addition to our growing library of natural, in house developed flavors and aromas, Yofumo also offers custom blend development programs for many of our customers.

Custom blends are one of the areas where we most enjoy working with our clients as it allows us to work with them from the ground up creating not just terpene blends that meet their specific requirements or design parameters, but also their biomass composition to ensure coherent blending profiles that achieve desired effects.

### METHOD 2 | Terpene Essentia

Based on our own Terpene Management Framework, we work with clients focusing on one or more of our application vectors to meet their goals.

[Plant on Self](#) | [Plant on Plant](#) | [Partial Plant](#) | [Natural Organics](#)

Whether its increasing medicinal terpene concentrations, enhancing existing profiles, or developing new flavors Yofumo provides the only integrated terpene management system for biomass in the market. Including cannabis, teas, leafy greens, as well as other vectors currently under development.

# YOFUMO TERPENE **MAPPING**

*“Perfected by Nature made Accessible by Yofumo”*

In order to accurately map the terpene profile of specific strains, Yofumo testing is done at 3 different stages during the grow and harvest process reflective of that grow's current practices.

## Based on Yofumo's analysis from our sample collection framework we then:

Provide growers with a detailed, multi phase analysis of their terpene profile and the chemical evolution it goes through under their existing processes.

Create an application protocol specific to that grower's needs for curing, augmentation, etc.

Highlight specific target terpenes, or if a unique or rare strain, a whole plant map.

Prepare and manage the grower's blends for use in Yofumo's systems.

The Cannabis aromatic profile is composed of more than 90 specific terpenes

Some compounds are in extremely minute amounts

All are found in nature in different combinations and concentrations in a variety of plants and trees

Medical terpene application is one of the fastest growing segments in the industry
